

POWER

The Havalina™ Germanium Fuzz can be powered by a single 9V battery, a Dunlop ECB003 adapter, or a DC Brick™ power supply. The power input is a 5.5mm x 2.1mm jack with the positive voltage on the outer sleeve. Using an external power supply will disconnect the battery. Disconnect the input jack to preserve battery life when not in use. The pedal will lock into bypass mode when it is time to change the battery. It also includes power protection circuitry to prevent damage from AC power supplies.

Fuzzed out germanium psychedelia!

The Havalina™ Germanium Fuzz from Way Huge Electronics is a germanium-powered fuzz box inspired by a vintage 3-transistor design that became the psychedelic shot-heard-round-the-world for guitar players, ushering in the new sound of rock. Designed around hand-selected Russian germanium transistors and a passive tone circuit, this peccary of a pedal can go from a soft, mellow crunch for meaty chords to a maelstrom of sonic fur that will make every note feel like a summer of love. Prepare to have your mind bent when you ride the Havalina!
